Professional Summary

Computer Science graduate (2025) with skills in Python, SQL, Power BI, Excel, Azure Data Factory, Databricks, and PySpark. Familiar with data cleaning, validation, analysis, dashboard development, and ETL pipeline workflows. Seeking an entry-level Data Analyst or Data Engineer role to contribute to data-driven decision-making and reliable data solutions.

Technical Skills

Programming: Python, SQL

Data Analysis: Data Cleaning, Data Validation, EDA, KPI Analysis, Reporting

BI & Visualization: Power BI, Excel, Tableau, Data Visualization

Data Engineering: ETL/ELT, Azure Data Factory, PySpark, Databricks, Data Integration

Cloud & Databases: Microsoft Azure, Azure SQL Database, SQL Server, Snowflake

Libraries & Tools: Pandas, NumPy, Matplotlib, Git, GitHub

Projects

Stock Price Forecasting using Machine Learning **Final Year Project**

Python, Pandas, NumPy, Scikit-learn, TensorFlow, LSTM, GRU

- Built an LSTM and GRU time-series model to predict stock prices 5 days ahead; engineered the full Python pipeline for preprocessing, training, and evaluation.
- Led a 4-member team and iterated on hyperparameter tuning to improve prediction accuracy.

Sales Data Analysis & Interactive Dashboard **Personal Project**

Python, SQL, Power BI, Excel

- Analyzed sales data to identify trends, patterns, and key performance indicators (KPIs) across products and regions.
- Cleaned and transformed raw data using Python (Pandas) and SQL to ensure accuracy and consistency before analysis.
- Built an interactive Power BI dashboard and dynamic Excel reports with filters, slicers, and charts to visualize sales performance, revenue trends, and regional analysis.
- Surfaced key insights, including top-performing products, seasonal trends, and revenue growth opportunities, for stakeholders.

ETL Data Pipelines using Azure Data Factory & Databricks **Personal Project**

Azure Data Factory, Databricks, PySpark, Azure SQL Database, SQL

- Engineered end-to-end ETL pipelines in Azure Data Factory, automating extraction, transformation, and loading across multiple structured datasets.
- Built PySpark transformations in Databricks notebooks to clean, filter, and aggregate data using Spark DataFrames.
- Wrote SQL queries and stored procedures for data transformation, cleansing, and validation; integrated Azure SQL Database for reliable ingestion.
- Orchestrated automated workflows using Lookup, Copy Data, Stored Procedure, and ForEach pipeline activities.
- Monitored and debugged pipeline runs to verify consistent data movement across workflows.

Education

B.Tech, Computer Science and Engineering — GIET Engineering College, Rajanagaram **2021 – 2025**

CGPA: 7.6 / 10

Intermediate (MPC) — SCIM Junior College, Tanuku **2019 – 2021**

CGPA: 8.3 / 10

Certifications

- Microsoft Azure Data Fundamentals (DP-900)
- NPTEL Certification in Cloud Computing

Key Strengths

• Analytical Thinking • Problem Solving & Adaptability • Leadership & Team Collaboration
